

Sauver.Office ODF Version Notification

Important Information about Sauver.Office and the new document format

The document that you tried to open was created with some other application that already supports OpenDocument (ODF) v1.2. It may contain features not supported by this version of Sauver.Office, which only supports ODF v1.1.

Now you have three options:

-

Just open the document with your current version of Sauver.Office, but consider that a few things might not get imported or displayed correctly.

-

Ask the creator / sender of the document to save it in the ODF 1.0 or 1.1 format. For this the creator / sender has to change the default file format from ODF 1.2 to ODF 1.0
